AirStrip Product Sheet

Closely monitor labor and delivery patients around the clock, from anywhere. With AirStrip ONE™ OB, clinicians have a window into the health status of each mother and baby, right from their smartphone or tablet. Used by hundreds of U.S. hospitals, AirStrip OB has assisted physicians with more than 1.5 million deliveries...and counting.

Part of the AirStrip ONE enterprise healthcare mobility solution, AirStrip ONE OB enables clinicians to assess and respond to:

- **Live patient waveform data**, including fetal heart rate and maternal contraction patterns
- **Additional patient information**, including nursing notes, vital signs, and patient exam status

AirStrip OB can improve clinical teamwork and communication, enhance perinatal safety and physician satisfaction, and reduce hospital risk exposure.

**RESPONSIVE CARE, ANYWHERE**

Time-sensitive waveform data is difficult to explain over the phone. AirStrip OB can improve communication and potentially reduce risk by giving clinicians the ability to view the fetal strip virtually anytime, anywhere. Built on AirStrip’s enterprise-class mobility platform, AirStrip OB is FDA-cleared on a wide variety of mobile devices.

**SAFEGUARDING PRIVACY AND SECURITY**

AirStrip OB aids HIPAA compliance with single sign-on that also satisfies even the most rigorous multi-factor authentication and security requirements. Additional robust security measures ensure confidential patient data is fully protected. All data is provided on demand and optimized for mobile devices to ensure rapid delivery even when only a slow-speed cell phone connection is available. Data is never stored on the mobile device.

**CLINICAL TRANSFORMATION MADE SIMPLE**

A simple, user-friendly interface enables busy clinicians to incorporate AirStrip OB into their patient care routines quickly and easily. In fact, hospitals with effective use procedures in place can gain hours of physician virtual bedside availability every month with AirStrip OB.

**A COMPLETE ENTERPRISE MOBILITY SOLUTION**

AirStrip OB is part of AirStrip ONE, a complete, vendor-neutral and data source-agnostic technology solution for healthcare mobility. AirStrip ONE provides the architecture, platform, and interactive user experience that can fully deliver on the promise of clinical mobility. Because the capabilities are built into the system, AirStrip ONE can dramatically accelerate enterprise-wide mobility implementation, time-to-benefit, and ROI.
AirStrip ONE™ OB

Virtual Views
Waveform data is displayed, including live and historical views of fetal heart tracings and maternal contraction patterns with annotations.

Login Supports HIPAA Compliance
The user is required to first enter the correct user ID and password to access the hospital network. VPN support and tokenless, 2- to 3-factor authentication are also supported.

Hospital Labor and Delivery Census
The names of patients being monitored in labor and delivery are displayed, as well as their doctor and bed. The census is listed by hospital, allowing the user to choose from multiple hospitals. Once the hospital is selected, the list of current patients is displayed, allowing the user to select a specific patient for more detailed information.

Strip Display
AirStrip OB displays the fetal strip and maternal contraction pattern information for an individual patient. This is the primary screen used to review patient information, which also displays the hospital name, room number, date and time.

Patient Data Display
Patient data can be displayed over the top of the patient’s strip chart or as a separate data screen. The patient’s name, age, fetal gestation, patient gravity, patient parity, last cervical exam information, current nurse and physician are all viewable.

Strip Zooming and Scrolling
The user can zoom the chart image and scroll forward or backward through the strip chart data. This function does not affect the ability of the live data to be accessed on the handheld device. Landscape view is also supported.

ABOUT AIRSTRIP™
AirStrip is guided by a bold vision: harness the power of mobile communications to change the way healthcare is practiced. The AirStrip ONE™ enterprise mobility solution can improve the quality and timeliness of care, increase patient and clinician satisfaction, can enhance financial performance, and reduce risk.

Headquartered in San Antonio, Texas, AirStrip is empowering the nation’s leading health systems to compete and succeed in today’s rapidly changing environment.

“In my opinion, this is an absolute must for obstetricians. If you can spend your whole day in labor and delivery, you may not need this. But if you are like the rest of us, you cannot defend not having the ability to monitor fetal strips anywhere, anytime.”

Lynn Simpson, MD
Cleveland Clinic - Cleveland, Ohio
