

# FIND OUT WHY OUR CUSTOMERS ARE BUZZING.

AirStrip's customers are at the forefront of healthcare innovation, embracing new clinical practice and business models. Read what they have to say about how AirStrip is redefining patient care.

## AIRSTRIP ONE

"As devices matured, we actually saw a change in the culture of our technology. [Clinicians] were coming to us, saying 'give us apps we can use'...For the ER to get a consult from the cardiology team [more easily and quickly] is valuable...Bringing the ability to see this data in [near] real time in campus and off campus was a game changer for us."

Mony Weschler, chief applications strategist and architect, Montefiore Medical Center. March 5, 2014

<http://bit.ly/MobileJourney>

"We focus on implementing strategies that position each hospital to be a leader in its community. This investment in AirStrip solutions will provide our physicians with the mobile technology solutions to deliver state-of-the-art care, while moving the RegionalCare system toward standardization in both infrastructure and operations."

Mark Gilliam, Senior Vice President and Chief Information Officer, RegionalCare. January 16, 2014

<http://bit.ly/MarkGilliam>

"AirStrip ONE has greatly advanced our abilities to manage healthcare for patients both inside and outside the hospital. Palomar Health and AirStrip have created a way for physicians to access a wide variety of medical data anytime, anywhere, to help them make the right decisions at the right time."

Benjamin Kanter, M.D., chief medical information officer, Palomar Health, an AirStrip innovation partner. February 11, 2014

<http://bit.ly/DrKanter>

"We work with a variety of different physicians to coordinate care, each using different systems and requiring separate sign-ons. AirStrip ONE will help us deliver more coordinated care by allowing us to look at all the data in one place, no matter where our physicians are located."

Dr. Shez Partovi, chief medical information officer, Dignity Health - Arizona Service Area. February 21, 2013

## AIRSTRIP ONE IN OB

"AirStrip allows physicians to easily monitor and identify any potential complications during labor and delivery. One of the most important advantages of this technology is that it improves communication between nurses and physicians, and allows caregivers to remotely monitor their patients at all times and immediately respond to the patients' needs."

Suzanne Wiesner, MBA/HCM, RNC, director of Maternal/Child Health and Patient Safety, Dignity Health. January 14, 2014

<http://bit.ly/Wiesner>

"Practicing high-risk obstetrics is important because there can be some very serious complications during pregnancy. My role is to ensure the health and well-being of both the baby and the mother. The first time I used AirStrip OB was quite an amazing experience – being able to view the fetal heart rate tracing right at that instant, and have an idea of how my patient and her baby are doing right at that moment."

Dr. Vivien L. Pan, AirStrip OB user, Mission Hospital in Mission Viejo, CA. January 8, 2013

## AIRSTRIP ONE IN CARDIOLOGY

“Mobility will strengthen our workflow while maintaining HIPAA compliance and break down geographic barriers by improving anytime, anywhere access to crucial cardiac care data. The ultimate benefits of mobility include improved outcomes. The success stories we have heard elsewhere convinced us that this is the right decision to make on behalf of both our patients and our clinicians.”

Lisa Gillespie, M.D., Chief Medical Officer, Rockdale Medical Center (LifePoint Hospitals). September 9, 2013

<http://bit.ly/DrGillespie>

“[AirStrip ONE Cardiology] shifts the paradigm for how cardiologists read one of the most common diagnostic tools used with heart patients, leading to faster, more precise diagnosis, and increasing patient safety. The better the information we receive, the faster we get it, the better the medical decisions we make — and that saves lives.”

Dr. Jose Soler, Cardiologist - Northwest Medical Center (HCA). April 27, 2011

<http://bit.ly/DrSoler>

“We can’t be in the hospital 24 hours a day. Cardiac surgeons are constantly interested in rhythm changes, QRS morphology changes, monitoring a variety of different pressures, and validity of the waveforms. Historically we’ve had to assess these measurements verbally over the telephone when we are not at or near the bedside. With mobile technology, assessment and potentially a therapeutic intervention can be made virtually immediately. It is a phenomenal step forward.”

Adam Harmon, MD, cardiothoracic surgeon at Sequoia Hospital (Dignity Health). September 9, 2013

<http://bit.ly/DrGillespie>

“Having the ECG data on a mobile device lets physicians consult on a case in almost an instant, as opposed to having a technician describe the patient’s condition, and reading an ECG that’s faxed or on a PDF, which can be hard to read. On your mobile, you can organize the data, compare it to past ECGs and share it with colleagues more easily, all with a flick of a finger across a screen.”

Dr. Frederick Chaleff, Cardiologist, Westside Regional Medical Center (HCA). April 27, 2011

<http://bit.ly/DrSoler>

## AIRSTRIP INSIGHT

“Information from AirStrip INSIGHT has been shared with department heads in clinical meetings, providing instructive usage patterns and concrete examples of where mobility usage can be strengthened to derive the full benefits. From a value assessment perspective, this is a first — a tool that helps us understand the power of mobility to support our patient care and administrative goals, while also giving us the ability to audit the use of AirStrip applications.”

June Cathey, Perinatal Informatics Coordinator, Rockdale Medical Center (LifePoint Hospitals). January 14, 2014

<http://bit.ly/Wiesner>

## COMPANY AWARDS/HONORS

“The TripleTree iAwards represents our firm’s continuous commitment to identifying and rewarding innovative companies that are positively shaping the future of healthcare — with real solutions that are delivering measurable value.”

Chris Hoffmann, Senior Director, TripleTree.  
AirStrip received a 2014 iAward for Operational Effectiveness. May 16, 2014
